SUMMARY

Data Analyst with **2.5 years** of experience and a Computer Science background, specializing in process automation, **root cause analysis**, and **Quality Assurance**. Proficient in **SQL, LLM, Prompt Engineering, Python, and dashboards**, with a proven ability to translate complex datasets into scalable operational solutions. Skilled in bridging technical execution with stakeholder management to **optimize high-volume workflows**.

EXPERIENCE

Google

April 2025 – Present

Data Analytics Apprentice

Hyderabad, India

- Engineered a dynamic SQL-based accuracy monitoring system following in-depth root cause analysis, boosting classification accuracy by **18%** and reducing FTE bandwidth by **29%**.
- Oversaw global vendor teams supporting high-volume pipelines and **700+ escalations** (including P0); regulated strict adherence to TAT benchmarks while ensuring validated confidentiality of PII data.
- Liaised with multiple FTEs as a Project Management Volunteer to orchestrate logistics and facilitator training for **30+ sessions** during the T&S Apprentice Bootcamp 2026.

Broker's Office

March 2024 – March 2025

Credit Analyst

Remote

- Analyzed complex financial profiles (DTI, LVR, LMI, credit scores) across **\$5M+** monthly lending volume to secure optimal lending matches.
- Conducted risk audits using compliance frameworks, achieving a **98%** loan approval rate with zero regulatory violations across major Australian lenders (ANZ, NAB, St George, Bank West).
- Automated data reconciliation between CRM platforms and Excel, analyzing client portfolio metrics to increase refinancing opportunities by **10%**.

PROJECTS

1P Commercialisation Autorater

Nov 2025 – Mar 2026

- Problem:** The PSCP 1P assessment was a manual, error-prone process that consumed the majority of operational bandwidth.
- Solution:** Engineered a **Golden Dataset** and automated assessment logic through systematized prompt engineering and **iterative LLM evaluation techniques**.
- Result:** Maximized system accuracy to **93%**, eliminating manual overhead and significantly reducing the error rate.

Deduplication Automation Pipeline

Feb 2026 – May 2026

- Problem:** Aggressive automated de-duplication heuristics caused high-risk false-positive removals across a **755K+** URL pipeline.
- Solution:** Performed root cause analysis using SQL and engineered a risk-tiered governance framework with automated triggers and mandatory manual reviews.
- Result:** Eliminated **100%** of unreviewed homepage deletions and improved moderation accuracy for **10.2%** of entire pipeline

German Trading Dashboard

May 2026 – August 2026

- Problem:** Fragmented revenue tracking across disconnected dashboards caused weekly reporting errors and high manual effort.
- Solution:** Designed a unified data schema and automated pipeline to integrate multiple data streams into a centralized reporting dashboard.
- Result:** Resolved data anomalies, eliminated manual errors, and slashed weekly maintenance time from 60+ minutes to under **5 minutes**.

SKILLS

Technical & AI: SQL, Python,Dashboarding, Report Authoring, Data Schema Design, Large Language Models (LLMs), Prompt Engineering, Iterative Evaluation, Golden Datasets

Data Quality & Analytics: Root Cause Analysis, Quality Assurance, Data Reconciliation, Data Governance, PII Compliance

Management & Alignment: Stakeholder Management, Requirements Gathering (BRD), Project Management, Vendor Oversight, Escalation Management

KEY ACHIEVEMENTS

- Recognized with **8 Peer Bonuses** for active contributions to T&S Sports and cross-functional collaboration.
- **Featured Speaker** at the T&S Apprentice Townhall.
- Participated in the 2025 Apprentice Hackathon and Trust & Safety Hackathon 2026.
- **Certified:** Google Advanced Data Analytics (Coursera) | Dec 2025.

EDUCATION

Godavari Institute of Engineering and Technology	2019 – 2023
<i>Bachelor of Technology in Computer Science</i>	CGPA: 8.75
